### Power Crisis in Iraq: Why Solar?

You've probably heard about Iraq's electricity woes - 14-hour daily blackouts in Baghdad last July, hospitals running on diesel fumes during Ramadan. But here's what most reports miss: customized solar solutions aren't just eco-friendly options; they're becoming survival tools. Let's crunch real numbers:

Iraq's Ministry of Electricity reports 35% power deficit during peak summer months. Diesel costs? Up 78% since 2022 due to subsidy cuts.

Now picture this: a 20kg portable box that can power medical refrigerators through sandstorms. That's what we delivered for a Mosul clinic in April - portable solar power kept vaccines viable during 3-day grid failures. But why doesn't standard equipment work here?

### The 4 Desert Demons

1. Thermal Cycling (-5°C nights to 55°C days)
2. Fine Sand Penetration (Particle size
