Decoding Korea's Game-Changing Solar Incentives

South Korea's Ministry of Trade just dropped a bombshell in June 2023 - 50% subsidies for portable PV systems under 500W. But why the sudden push? Well, it's not really sudden when you consider they've been piloting this since the 2022 fuel crisis. I remember talking to a Jeju Island fisherman last month who's now running his ice makers entirely on foldable panels - "Like catching sunlight in a net," he quipped.

The policy specifically targets:

- Outdoor enthusiasts (camping accounts for 38% of Korea's leisure spending)
- Disaster response units (remember Typhoon Khanun's week-long blackouts?)
- Urban households with
